

# Grease trapping and removal supplier list

Here you'll find a list of suppliers who provide grease trapping equipment, installation, maintenance and grease removal.

This list is not a recommended supplier list.

Therefore, each food service establishment can use alternative suppliers, provided any proposed grease removal equipment conforms to recognised sizing criteria. Several suppliers also offer support with staged payment terms if this is a requirement.

## Staying compliant

It is strictly the responsibility of the food service establishment to ensure that a properly licensed plumbing professional installs the equipment in accordance with all plumbing standards and that the equipment meets the following standards:

- **Passive grease traps** must be designed, installed, operated, and maintained in accordance with the following standards pertaining to grease separators:
  - B.S. EN 1825:2004:** Principles of Design, Performance, and Testing, Marking and Quality Control.
  - B.S. EN 1825:2002:** Selection of Nominal Size, Installation, Operation and Maintenance.
- **Grease removal units (GRU's)** must be designed in accordance with the following standard issued by the Plumbing and Drainage Institute:
  - Standard PDI-G101:** Testing and Rating Procedure for Grease Interceptors (Includes an appendix of sizing and installation data).

## We're here to help

Before installing any equipment, contact your environmental inspector with the plans your grease trap supplier has given you. We can give you extra help and advice by checking the proposed installation is correctly sized for your business's needs. You can do this by sending all grease trap plans to the email address within your letter from the Anglian Water Network Protection Team, or call us on **0122 364 3505** for any further assistance.

Here you'll find a list of suppliers who provide grease trapping equipment, installation, maintenance and grease removal.
