

# Spotted a trickle?

A dripping tap or a trickle down the back of the loo can waste **thousands of litres of water**. That's like leaving a tap running non-stop (and you wouldn't do that at home). Water is one of the world's most precious resources, so every drop we can save makes a big difference.

Keep an eye out for leaks to protect our environment – the more water we can save, the more there is to go around, for all of us and our local wildlife.

**If you spot a leak – let the reception team know.**
